DETAILED ACTION

Specification

The disclosure is objected to because of the following informalities:

Paragraph [00001], line 1, the phrase "Now U.S. Patent No. 6,653,844" should be inserted after "July 27".

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 21-31 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-20 of U.S. Patent No. 6,653,844. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims in Patent '844 discloses all the claimed limitations of claims 21-31 in this application.

Claims 21-31 would be allowable if Applicant file in a Terminal Disclaimer to overcome the Double Patenting rejection discussed above.

Allowable Subject Matter

The following is a statement of reasons for the indication of allowable subject matter: Prior arts of record do not disclose a system for displaying abnormalities of a non-optical wire communication line. The system comprising: a receiver operable to receive a reflected trace from the wire communication line; a processor operable to exponentially adjust the reflected trace so as to reduce an exponential gain decay of the reflected trace which structurally arranged and functionally operated as claimed in claims 21,26.
